In-House Tooling Capabilities

As well as being one of the largest rubber moulders, we are one of the few companies in this industry to offer a one-stop-shop. Contact Rubber also specialises in manufacturing special moulds and technical tooling which require superior dimensional stability and surface finish to tight tolerances in order to produce superior quality rubber moulded components.

The company's staff are able to project manage the entire operation from start to finish. This means lower costs, reduced lead times and greater overall control of the operation.

Engineering and R&D

Focussed on your evolving needs

Contact Rubber has a highly skilled engineering and R&D team supporting customers with tooling development, material property and selection in order to meet the desired product requirements.

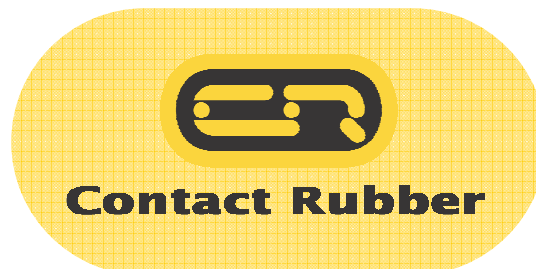

We assist you in designing your custom moulded components, ensuring physical properties, chemical compatibility, and general characteristics.

Find the right information among an ever-increasing volume of available data, and turn accurate and reliable information into the manufacturing of your custom rubber moulded components that works for you.

Stocking Programs

By taking advantage of our stocking programs, you can be assured to have the needed parts on hand.

- Moulded parts stocking programs will maintain customer's costs lower
- Moulded parts can be pre-packaged or binned to provide immediate shipping when released
- Programs are customized to fit your requirements
